

Bug Report on myVisit App

Title - app lets you continue with an invalid phone number.

Description - when entering “0500000000” at the registering part of the app, it lets you continue, even though the phone number is not valid.

Security Level - **low**

Steps -

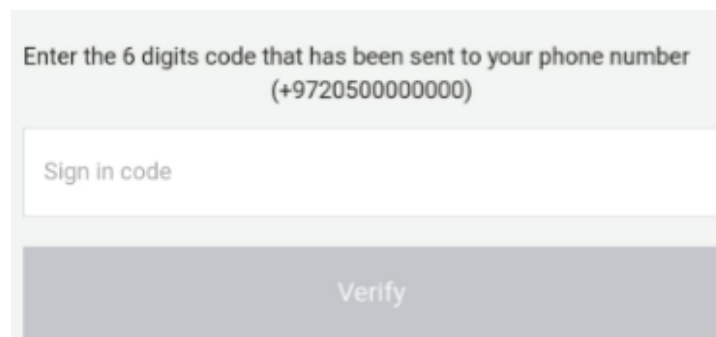

- Open myvisit app and click on “sign in”
- Click on the phone number section and enter the phone number 0500000000
- Click continue

Expected results -

The app wont let the user continue with an invalid phone number

Actual results -

The app lets the user continue.

Enter the 6 digits code that has been sent to your phone number

Bug Report on myVisit App

Title - the app doesn't sign out of the account even if you crash it.

Description - when crashing and rebooting the phone the app still keeps you signed in to your account with all of the appointments and details.

Security Level - low

Steps -

- Open myvisit app and then close it
- Go to the plothing apps on your phone and close them- the app will still keep you signed in
- Then go to the settings on your phone to the myvisit settings and click on “force stop” the app- the app will still be signed in.
- Reboot your phone and enter the app- the app will still be signed in

Expected results -

The app will sign out of the account if you close the app and erase it from the open apps and the other steps.

Actual results -

The app keeps you signed in and the information is open to everyone that has your phone for approximately 3.5 hours.

Bug Report on myVisit App

Title - the app crashes after making a couple of visits together.

Description - when making visits one after the other the app will crash and kick you out, that will make you sign in all over again.

Security Level - **medium**

Steps -

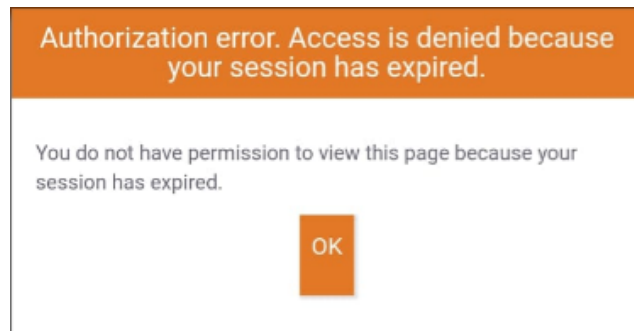

- Open myvisit app
- Go to the plan a visit section and plan some visits in a row
- Wait until the app gets too overloaded and crashes
- Click on the app again and see that it's needed to sign in again and that you were thrown off the app.

Expected results -

The app will let you make as many visits as you want while performing fine

Actual results -

The app gets overloaded and crashes, there is an error message and then you are kicked out.

Bug Report on myVisit App

Title - the app's navigation future does not work.

Description - when making an appointment an address appears with a navigation button to navigate to Waze. but when you click on it it redirects you to the app store to download the app/ or to the app itself but not to the address.

Security Level - **medium**

Steps -

- Open myvisit app
- Go to the plan a visit section and plan a visit
- Click on the green navigation arrow near the address section when the visit is set.
- Be redirected to waze but not to the address, only to the app.

Expected results -

The app will redirect you to the address of the appointment.

Actual results -

The app only redirects you to the waze app and not to the address of the appointment.

Bug Report on myVisit App

Title - the app sends sms notifications even if you denied them/ did not approve of them.

Description - there is an option to approve sms notifications on the settings feature in the app, but even if the option for messages is turned off the myvisit app will still send you a lot of messages for every appointment made, And for every remainder. Even if the user checked the option to be “on” and then to “off”, The app will still send messages.

Security Level - **high**

Steps -

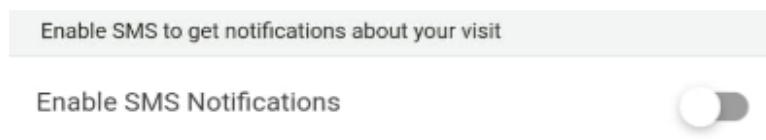

- Open myvisit app
- Go to the settings and check if the messages notification are on or off- if on torn off.
- Make an appointment
- Get notifications

Expected results -

The app will not send sms notifications if not approved

Actual results -

The app still sends sms notifications even if not approved

Bug Report on myVisit App

Title - the app won't let you schedule a visit to the pharmacy because the pharmacy is too far away.

Description - there are only 4 options available for pharmacies on the app, all of them are in the center of israel. I live in Pardes Hana and tried to schedule an appointment but the app didn't let me because i was too far away. But there isn't any other option although there are 5 pharmacies near me that are not on the app.

Security Level - **Medium**

Steps -

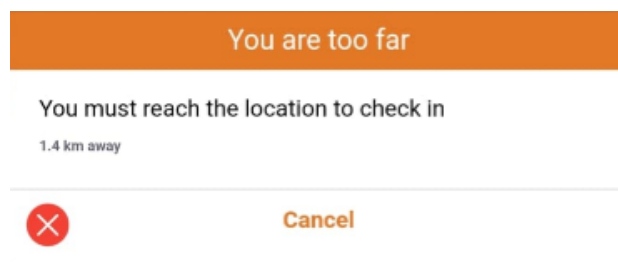

- Open myvisit app
- Go to the Maccabi feature and click on the pharmacy option.
- Click on any of the four options
- Get an error message

Expected results -

The app will have all the pharmacies near you like they do the other facilities, or it will let you schedule to the one far away.

Actual results -

The app has a limited supply of pharmacies although there are 5 just near, and it wont let you schedule to the ones far away.

Bug Report on myVisit App

Title - lets you schedule an appointment even when it said there are no dates available.

Description - when trying to set up an appointment in some different departments it says there are no dates available but if you click on it sometimes you can still set a visit and the visit will appear as if it is set.

Security Level - **high**

Steps -

- Open myvisit app
- Go to the bituach leumi/hevrat hashmal/ egged and the rest and try to set an appointment until you get to a screen when there are no dates available.
- Click on any date until it lets you schedule an hour, sometimes it lets.
- Set an appointment even when it said there are none.

Expected results -

The app will not let you set appointment when there are none.

Actual results -

If you click on enough dates you can set an appointment even when the system says there isn't one available.
